Keep your Coconuts Clean !... Hydra-Cell makes the pressure

The manager a Brazilian coconut orchard that covers in excess of 100,000 acres, desperately needed to spray insecticide to protect the sweet fruit at the top of the trees. Much of the available equipment was not adequate to reach the coconuts and knock off those pesky insects. The customer finally heard of the existence one successful spray rig that incorporated a Hydra-Cell pump. We confirmed that the Hydra-Cell pump could do the job, an urgent order was placed and within one week the pump was air shipped out. The pump is mounted on a mobile rig that moves through the orchard while the operator easily blasts bugs at the very tops of the coconut trees.

Hydra-Cell[®]
Seal-less Pumping Technology
